

Dear Human Resources Manager,

I am writing to apply for the Junior Data Scientist position at Top Retail Company, a role that closely aligns with my experience in statistical analysis, machine learning, and A/B testing. My background in data science and analytics positions me to contribute effectively to your team's mission of leveraging machine learning and statistical analysis to drive business decision-making.

At TechFlow Solutions, I built automated dashboards in Python (Plotly/Dash) for supply chain KPIs, reducing weekly reporting time from 8 hours to 30 minutes—a 94% reduction in reporting overhead. I analyzed customer churn patterns across 5,000+ users using Python (Pandas/NumPy), identifying retention factors that drove USD120K annual savings through targeted retention campaigns. At Global Logistics Corp, I designed an A/B testing framework for warehouse slotting optimization, increasing picking efficiency by 22% and contributing to a USD250K process improvement initiative. These experiences demonstrate my ability to mine, manipulate, and analyze multiple datasets to build scalable enterprise analytics solutions and generate actionable insights.

My cross-sector experience has strengthened my ability to translate engineering analysis into business outcomes. In a 6-month internship, I optimized route planning for 80+ delivery routes using Python optimization algorithms, reducing fuel costs by 18%. In my capstone project, I developed a time-series forecasting model using XGBoost and LLM-extracted features from unstructured demand notes, achieving 14% lower MAPE compared to baseline ARIMA on a 10K+ SKU dataset. I also created an interactive Tableau dashboard tracking 200+ student internship outcomes, automating ETL pipelines that reduced manual reporting time by 75%.

I am available for the on-site schedule at the Hong Kong facility and would welcome discussing how my background in mechanical design, product validation, and cross-functional collaboration can contribute to Top Retail Company's continued success.

Yours faithfully, Tony Cheung
